

Pennine Stone Ltd Quality Policy

Pennine Stone Ltd manufactures Cast Stone and similar products which are sold to the housebuilding, construction and similar industries. The range of products is vast, but generally the majority of items can be described as “products manufactured using natural aggregates and cementitious binder that are intended to resemble and be used in a similar way to natural stone”.

The products are normally intended for use in an outdoor environment in the same way that bricks, roofing tiles and other concrete building products are used.

Once incorporated into a building or similar structure, the products will weather in a fashion similar to natural stone, and that weathering will be governed by a number of factors including aspect, sunlight conditions, overhanging trees and shrubs and location.

Pennine Stone Ltd conforms to

BS 1217:2008 and is also certified to the ISO 9001 quality management standard. It is also a member of a number of trade associations and is committed to manufacturing products which surpass the standards and specifications required by these organisations.

The relevant Associations are currently;

- United Kingdom Cast Stone Association (UKCSA)
- International Glassfibre Reinforced Concrete Association (GRCA)

In addition, our TecCast range of products has been awarded a British Board of Agrément (BBA) certification.

The Pennine Stone Internal Management System sets out production and quality control processes which ensure that we comply with the standards specified by the associations above. Adherence to these procedures, as well as the continual improvement, regular auditing and review of the appropriateness of these procedures, ensures that the quality of our products achieves these requirements and that the products which reach our customers are structurally and aesthetically appropriate.
